Unfortunately crashes do happen. The purpose of this seminar is to enable fleet owners, managers and supervisors to develop advanced strategies for dealing with crashes and reducing future vehicle collisions that will help them focus on preparing for and responding to collision incidents.

Statistics prove that drivers involved in a crash are more likely to be involved in another incident. The seminar will discuss strategies that can be implemented to help control these losses and reduce future incidents. We invite you to attend!

By the end of this program, attendees will be able to:

- Recognize appropriate fleet controls and what ANSI considers best practices guidance for crash management.
- Construct training for drivers to educate them on their responsibilities at the incident scene and beyond.
- Outline management's role in responding to crash incidents, including basic scene investigation.
- Apply tools to retain what needs to be kept in crash files and records.
- Employ follow-up strategies to use crashes that do occur to improve the organization's performance in the future.

Registration begins at 7:30 a.m. The seminar will be from 8:00 a.m. to noon. Complimentary lunch will be available. Reserve your space now because seating is limited!

To register or for further information, please call Christy Mogensen at 866-777-9812 toll free or e-mail her at USZ_RERegistrations@zurichna.com.
