

Zurich Cyber coverage for manufacturers

Manufacturing companies face cyber risks similar to other businesses, from protecting personal data of employees and customers to safeguarding proprietary information vital to products and manufacturing operations.

It's a challenge complicated by the fact that manufacturers incorporate more new equipment, such as robotics and sophisticated industrial control units, that are connected to their network and therefore vulnerable to new and evolving attacks.

The Zurich Cyber Insurance Policy helps companies in all areas of manufacturing protect against cyber security risks. Now, the addition of Zurich's Cyber Manufacturing Enhancement Endorsement - a new, industry-specific manufacturing endorsement - focuses the available coverages of the Zurich Cyber Insurance Policy to address the particular risks that manufacturers face.

Key coverages

Zurich's Cyber Manufacturing Enhancement Endorsement may extend available coverage to include:

- Computer hardware, software and electronic data, as well as associated input and output devices
- Computer peripheral devices, including wireless and mobile devices
- Networking equipment, telephone systems and components
- Firmware and electronic backup facilities, including systems accessible through the internet, intranets, extranets or virtual private networks
- Any components that are part of supervisory control and data acquisition systems, programmable logic controllers or other industrial control systems

Building cyber resilience

In addition to the coverages available under the Zurich Cyber Insurance Policy, Zurich works with manufacturers of all sizes to improve cyber risk awareness and resilience. Through our relationship with ZenOpz™, we can

provide endpoint scanning, detection and risk assessment services. And through our in-house Risk Engineering services, we can help contractors design and implement full cyber security programs.

Cyber Risk Engineering Services for manufacturers

Zurich's team of skilled Cyber Risk Engineers offers insights and guidance for manufacturing customers seeking to better understand, manage, and mitigate cyber risk. In addition to an effective safety program, we help contractors ensure they have a robust information security management system built on three pillars: people, process, and technology. Zurich works with you to provide:

People services including:

- Board and C-suite education
- User awareness training
- Security team training
- Hiring practice security guidelines
- Access management

Process training includes, but is not limited to:

- Cyber security strategy
- Capability road map
- Policies and procedures
- Management metrics for cyber security

Technology solutions can be provided through relationships Zurich Cyber Risk Engineers have with:

- Leading security vendors
- Consultants
