

ClickSafety[®]

Zurich has aligned with ClickSafety* to provide safety and compliance e-learning solutions designed to help you maximize safety resources by measuring performance, improving access to training and implementing processes proven to boost productivity.

Your challenge

The Occupational Safety and Health Administration (OSHA) and other regulatory agencies require safety training for employees. Additionally, although initially conceived as a voluntary program, many states have crafted legislation to make OSHA 10 and/or 30-hour training mandatory for construction employees. Coupled with the shortage of skilled laborers, the diversity of the current workforce and the time lost participating in offsite training, meeting these responsibilities is challenging. Failure to comply with safety regulations can also lead to fines, increased exposures, injuries and even fatalities.

Our solution

ClickSafety provides online safety, health and environmental (SH&E) training through more than 300 interactive courses, including over 50 offerings in Spanish and OSHA 10- and 30-hour classes. Topics range from general safety awareness to advanced safety training for specialized workers, as well as OSHA credential programs for managers and supervisors. ClickSafety's cost-effective and convenient method of training enables safety directors to focus on strategies while placing accountability for completing the training directly on the

employees. Online reporting capabilities are available to simplify the process of reporting completed training to agencies and customers as needed.

The online training is available to Zurich customers at a 25 percent discount for all non-OSHA authorized courses and a reduced rate for all OSHA authorized courses. Custom course development is also available upon request.
