

Fleet safety program development and consultation

Zurich's Risk Engineering consultants can help assess your current fleet exposures and safety controls as well as identify opportunities for improvements to help reduce your fleet losses.

Your challenge

A formal fleet safety program that effectively addresses exposures such as driver selection, training, incident follow-up and compliance issues can help promote driver safety. But developing and implementing such a program can be a challenging task, especially as your organization seeks to deliver the best products and meet regulatory demands.

Our solution

A comprehensive fleet safety program with a consistent set of protocols can help save time and money by keeping your employees safe and maximizing efficiency. Zurich's experienced consultants work with you to develop and update motor fleet safety programs to be consistent with industry best practices suggested by the American National Standards Institute (ANSI) Z15.1.

The ANSI standard sets forth practices for the safe operation of motor vehicles that you own or operate, including:

- Management, leadership and administration
- Operational environment
- Driver considerations
- Vehicle considerations
- Incident reporting and analysis

Zurich can assist with real-world approaches that help your organization live by the policies that it has established.

Additional resources

The ANSI Z15.1 Safe Practices for Motor Vehicle Operations standard is available for purchase from ANSI at www.ansi.org/.

OSHA offers an excellent resource on fleet best practices at www.osha.gov/Publications/Safe_Driving_Practices.pdf.
