

# Zurich SafetyNet for Construction

Zurich SafetyNet enables contractors to measure the effectiveness of their safety programs, determine leading indicators of risk and identify where their next injury is likely to occur.

## Your challenge

Collecting data from various locations can often be a labor-intensive and manual process, and inconsistent observations can lead to inaccuracies in the data. These inconsistencies generate faulty results that may not adequately address your real problems. Even when data is captured electronically, the lack of comprehensive analysis further complicates accurately identifying and predicting safety risks.

## Our solution

Zurich SafetyNet for Construction, a proprietary service from Predictive Solutions\*, allows the recording of both safe and unsafe conditions using a combination of handheld devices and document scanning technology. These observations are merged with predictive models to generate real-time reports on future safety risks. Contractors can then use these insights to turn the predictions into operational changes that help to strengthen their safety culture and prevent injuries.

By minimizing the delays in reporting and facilitating immediate action based on insightful business intelligence, SafetyNet helps to minimize injuries, reduce workers' compensation costs and increase employee participation, competency and accountability in safety processes.
